

A Complete Line of Packaging Options for OTC and Retail

- Ecoslide-OTC
- Custom Folded Cartons

The Ecoslide-OTC is a re-closable child-resistant paperboard pack for over-the-counter products that are packaged in blisters. The innovative, eco-friendly solution features a push-button locking mechanism that provides child resistance while eliminating the need for the more traditional “peel back/push-through” method of removing pills from blister packs.

Keystone also specializes in Over-The-Counter products include non-prescription medications, vitamins, and nutraceuticals, in a variety of dosage forms. We frequently produce cartons for both hand-fill and high speed automation of folding cartons used with blister packs, bottled products, sachets, and other primary packaging formats.

The **EcoSlide-OTC** locking mechanism is identical to a newly-enhanced, easier-to-activate version found on the company’s most recent EcoSlide-RX 3.0 package. EcoSlide OTC’s simple push-button locking mechanism addresses long-standing consumer complaints about the intricate, often cumbersome removal process required by most over-the-counter, “peel and push” child-resistant blister packs.

Our **Custom Folded Carton** packaging products are sold on retail shelves and demand high quality graphics that help influence the consumer buying decision. Our production facility is both cGMP compliant and GMI Prime certified. Packaging quality impacts your brand and GMI Prime ensure brand owners achieve more predictable printed packaging results, with each production run—so you can protect your brand and your bottom line.
