

A Complete Line of Packaging Options for Prescription Pharmaceuticals

- Ecoslide-RX 3.0
- Key-Pak wallet card

Ecoslide-RX 3.0 passed Consumer Product Safety Commission (CPSC) protocol testing for child-resistance and received the highest rating, F=1. The Ecoslide-RX 3.0 package format allows for large, easy-to-read type on all sides of the package for clear product identification. As the unit is pre-filled with a 30-day supply and is label-ready, pharmacy dispensing time is reduced when compared to counting and bottling pills by hand.

Key-Pak is more than convenient—it's also extremely versatile, working well with challenging product categories including friable, gel caps and liquid-filled products. The functionality of Key-Pak makes it exceptionally practical for difficult or unusual dosing situations, such as titration regimens, multi pill dosing, and more.

The **Ecoslide-RX 3.0** package is typically distributed to pharmacies in a 12-count paperboard dispenser carton that takes up less shelf space than the equivalent dosage amount packaged in pre-filled, unit-of-use bottles.

Patient dosing instructions are much easier to communicate through **Key-Pak** with printed text and graphics. If "Brand Identity" is important, the generous billboard space offered by Key-Pak far outshines what an amber vial offers at a local pharmacy. The Key-Pak design also works with a variety of blister and lidding materials and fits many existing fulfillment infrastructures. Key-Pak is compatible with either thermoformed or cold-formed blisters and can be designed for most dosing regimens.
